

RAGHUL S NAIR

Data Scientist · Credit Risk & Customer Analytics

Email: raghulcodes@gmail.com · Mob: 94959 23968 · Portfolio: raghulsn.github.io/Portfolio · Bengaluru

PROFESSIONAL SUMMARY

Mathematics graduate specialising in **credit risk modelling and customer analytics**. Hands-on experience building end-to-end ML pipelines — from 1.8M consumer loans to 7,000+ customer records — with every outcome measured in **AUC, KS statistic, lift curves, and projected revenue impact**. Targeting BFSI and analytics-driven product companies where statistical rigour and business decisions intersect.

TECHNICAL SKILLS

Languages & Tools: Python · SQL · DAX · Git · GitHub · Jupyter Notebook

ML & Modelling: Scikit-learn · XGBoost · Logistic Regression · Random Forest · Feature Engineering · Cost-Sensitive Learning · Threshold Optimisation · Lift & Decile Analysis · Expected Loss Simulation · Risk Segmentation

Visualisation: Power BI · Matplotlib · Seaborn · Plotly · Pandas · NumPy

EXPERIENCE

Data Science Intern · iDataLytics

Oct 2025 – Jan 2026

- Completed a structured 3-month hands-on data science program covering real-world ML workflows - data ingestion, cleaning, feature engineering, model building, and evaluation.
- Applied Python, Pandas, Scikit-learn, and visualisation tools to end-to-end project pipelines; received completion certification upon delivery of assessed project work.

PROJECTS

Customer Churn & Retention Optimisation Engine · Python · XGBoost · Scikit-learn | [view](#)

- Trained 3 ML models on 7,000+ records; XGBoost achieved **ROC-AUC 0.84** (18% above baseline) with **3× lift** in top 20% risk segment via cost-sensitive learning — 3× more churners captured per marketing rupee.
- Designed a budget-constrained retention framework delivering **20% uplift in projected retained revenue** over score-only targeting; on a ₹10Cr book equates to ₹2Cr retained annually.

Probability of Default Modelling & Credit Policy Optimisation · Python · Logistic Regression | [view](#)

- Built a regulatory-grade PD model on **1.8M+ consumer loans** under time-based validation (production standard); achieved **AUC 0.71 · KS 0.31 · Gini 0.42** — consistent with BFSI production scorecard benchmarks.
- Decile analysis showed **9× default spread** (5% → 46%) across risk bands; expected loss simulation identified PD ~0.20 as optimal approval cutoff — **65% approval rate** with controlled 14% portfolio default.

Sales Performance Analytics Dashboard · Power BI · DAX · Star Schema | [view](#)

- Engineered a star-schema model across 10,000+ transactions with **12+ advanced DAX measures** (CALCULATE, RANKX, SAMEPERIODLASTYEAR); identified top 3 regions driving **68% of total revenue** and cut monthly reporting time by ~8 hrs.

EDUCATION

B.Sc. Mathematics · University of Kerala

Graduated 2025

Relevant coursework: Mathematical Statistics · Linear Algebra · Probability Theory · Numerical Analysis · Operations Research

PROFESSIONAL TRAINING

IBM Professional Certificate in Data Science · Coursera

Google Professional Certificate in Advanced Data Analytics · Coursera

Professional Certificate in Data Science & AI · NSDC · Avodha
